OILFIELD

Care in R&D

The history of **Chimec** deals with important challenges faced together with the customers, as well as enthusiasm in the achievement of common goals. For decades, Chimec has been a trustworthy partner both for research and development of innovative technologies and field applications.

Thanks to our continual research, care in development and reliability of applications, Chimec plays an international role in over **40 countries**. Chimec is a leading company for Oil&Gas treatments, assuring process optimization support targeted to Return On Investment strategies. Chimec has always striven to maintain the highest standards to preserve our environment and protect the health and safety of our employees. Innovation results from a synergistic combination of team work: technical staff and field specialists are continually present on site.

Reliability in application

production optimization
flow assurance
asset integrity
respect for environment

Asset Integrity Management - AIM

A good plant asset management to introduce effective measures for risk assessment/control as well as for safety and environment, is indispensable to accomplish targets. Chimec's sound know-how makes it the ideal partner for the development and management of chemical treatments, these are specifically designed according to AIM strategies and able to control any kind of corrosion and biofouling, as well as enhance the process and its relevant CAPEX and OPEX. Support in the Definition of Return On Investment competitive strategies is the added value Chimec solutions can offer.

Process/Production Optimization

The aim of Chimec's Oil&Gas solutions is the optimization of hydrocarbons in production processes. Chimec's chemical and treatment philosophy is to apply tailored solutions, resulting from a deep investigation of the process and system parameters. Only an accurate definition of the right KPIs (Key Performance Indicator) allows the correct performance evaluation and therefore the process optimization. Chimec does not only provide effective solutions: our big challenge is to assure reliable support in the management of the whole process.

Flow Assurance

Flow Assurance, which is extremely diverse, encompassing many different and specialized subjects and bridging the full range of engineering disciplines, is becoming more and more important, since companies started to exploit high viscosity crudes, non-conventional reservoirs including hostile environment areas. Chimec took up this challenge aiming to find innovative strategies to ensure successful and economical flow of hydrocarbon stream from reservoir to the point of sale. Chimec specialist's innovative approach, which is based on simulation software applications and advanced analytical techniques of selection, investigation and monitoring, allows the development of solutions plant integrated, environmentally friendly, effective and cost saving.
